

WIDE OPEN

Custom Digital Progressives + AR

The widest corridor available in a progressive lens, coupled with anti-glare coating for the clearest vision possible.

CLOSE ENCOUNTERS

Short Corridor Progressives + AR

Sometimes you want a lens that gives you a huge amount of reading room and nothing else. This lens option condenses the intermediate/computer zone to give you more room for close work.

AROUND THE OFFICE

Office Progressives + AR

These lenses are designed for the modern office environment. They are specially designed with the intermediate/computer zone higher in the lens so you don't end up with neck and back strain by the end of the day. Your boss can be a pain the the neck- your lenses shouldn't be!

DIGITAL FOR DIGITAL

Digital Progressives + AR

The designers of this lens spent a lot of time studying how people actually use their progressive lenses throughout their day, and they came up with this amazing option that gives wearers nice wide intermediate and reading zones, while also adding in a specialized "technology zone" designed for cell phone and tablet use- no more holding your technology in low, uncomfortable positions!

JUST THE BASICS

Standard Progressives

A no-frills, basic option good for a backup pair or just for occasional use.
